Django for Web Development & Artificial Intelligence
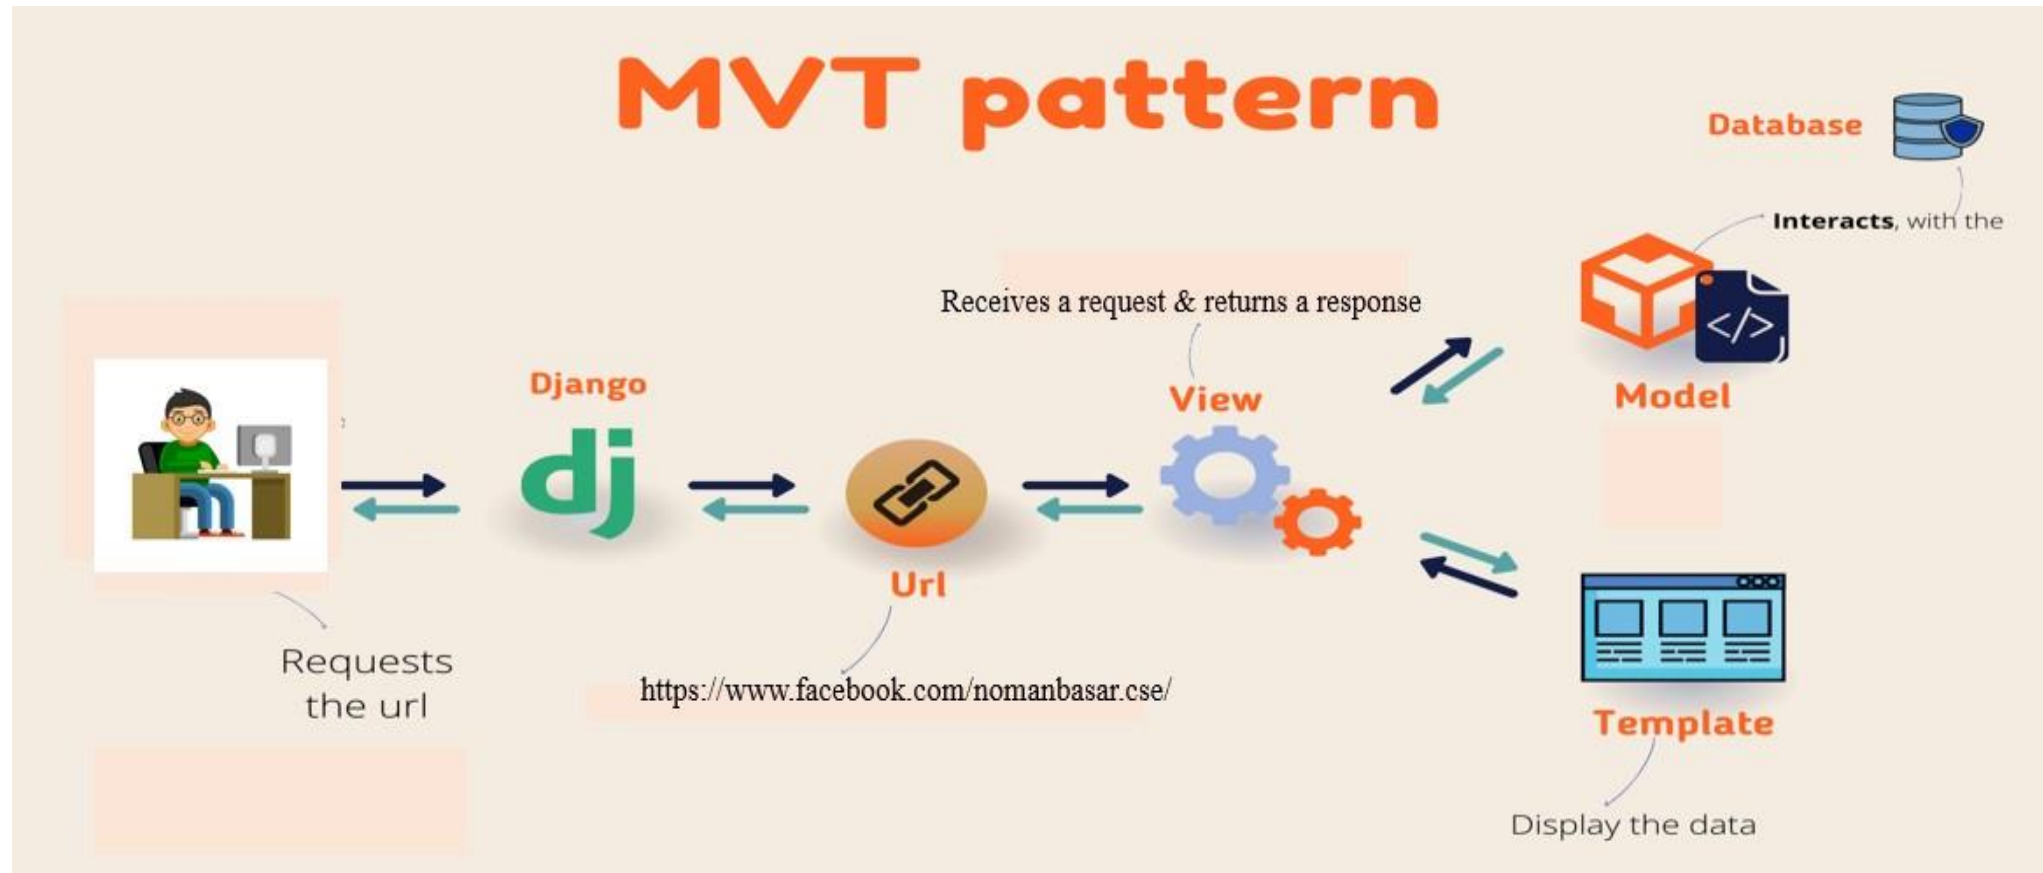

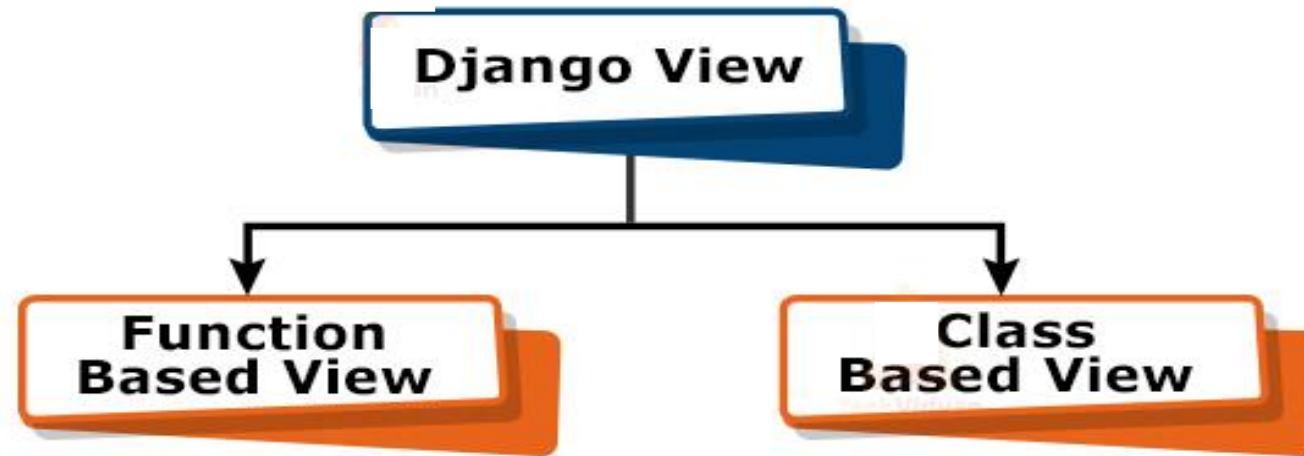

Lecture - 06

Instructor:

Md. Abu Noman Basar
Django Developer

MVT Structure

Types of View

Function Based View

❑ **Function Based Views:** Function based views are the views in Django that are defined by functions. These python functions take a web request and returns a web response.

```python
def blog(request):
    return render(request, 'blog.html')
```

Class Based View

❑ **Class Based Views:** Class based views are Django views based on Python classes. As mentioned in the Django official documentation, 'class based views do not replace function-based views, but have certain differences and advantages when compared to function-based views'.

```
class MyView(View):
    def get(self, request):
        return HttpResponse("This is a GET request")
```
